

NOVA URBAN 54000 SERIES

The Nova Urban High back seat uses the same narrow frame as the 56000/57000 seats with an added 120mm height on the backrest (squab). This seat type is better suited where a higher back is required rather than a headrest, or alternatively can be used to provide a high specification seat when fitted with the luxury headrest.

Each seat assembly will have a part number that is a combination of seat type, trim code and any other options selected from the table.
